

Natural Pools & Ponds

Natural pools and ponds are an increasingly popular option for those desiring a 100% chemical free swimming experience. A natural biofiltration zone cleans the water biologically with plant filtration and the help of aerobic and anaerobic bacteria.

Natural Pools : BioNova

BioNova natural swimming pools have been in operation for over 20 years in Europe and since 2003 in Australia, using patented Germany technology. Water is kept moving so mosquitoes are not a health issue associated with the pools. Chemically treated pools can discharge up to three times its volume of water into the sewer each year. Natural pools create 'living water' without any waste water, and require significantly less energy for their mechanical operation.
